## MOLECULAR BIOLOGY

### Division Of Molecular Diagnostics

### Reason for Request: COVID-19 PCR.

**Source:** Oropharyngeal Swab & Nasopharyngeal Swab.

**Result:** COVID-19 RNA Not-Detected

### Method:

High efficiency nucleic acid release technology is applied in this assay to achieve ultra-rapid release of viral nucleic acids. Extracted RNA is used for probe-based fluorescent PCR to detect the corona virus 2019 (COVID-19) RNA. Specific primers and probe are used to detect ORF1 ab gene of COVID-19.  
As accuracy of PCR from Oropharyngeal swab and/or Nasopharyngeal swab is about 60%.  
This result might be used to aid in the diagnosis of COVID-19 infection. It should not be used as conclusive evidence of the infection nor exclusion of the disease.
